# YOGESH JADHAV

Ph: +91 7558562489 | yj43221@gmail.com | Portfolio | LinkedIn | GitHub

**QA / Software Testing | Manual Testing | API Testing | SQL | Playwright | Pytest**

## PROFESSIONAL SUMMARY

QA-focused software professional with hands-on experience in manual UI, API, database, UAT, and build testing for a healthcare application. Experienced with Postman, SQL, Jira, Playwright-based automation, and defect reporting, with additional experience in AI output evaluation and AI-assisted testing workflows. Leverages AI tools to accelerate test development, documentation, debugging, and analysis while independently validating results.

## TECHNICAL SKILLS

- **Testing:** Manual Testing, Test Case Design & Execution, E2E Testing, UAT, Build Validation, Defect Reporting
- **Automation:** Playwright, Pytest, Selenium, Python
- **API Testing:** Postman, REST APIs, HTTP Methods, JSON, Authentication, Error Handling
- **Database:** SQL, PostgreSQL, MySQL, Data Validation, Joins, CTEs
- **Tools:** Git, GitHub, Jira, Confluence, Browser DevTools
- **Practices:** STLC, Defect Lifecycle, Test Planning, Agile/Scrum

## PROFESSIONAL EXPERIENCE

**Post-LLM Training Intern** | *Ethara AI* | *Remote* *Jan 2026 – Aug 2026*

- Evaluated AI-generated outputs against quality guidelines, identifying factual errors, inconsistencies, and instruction-following issues.
- Maintained data quality while adapting to changing evaluation guidelines in a target-driven remote environment.

**Software Development Intern** | *Hub9* | *Remote* *Jan 2025 – Oct 2025*

- Performed manual UI and end-to-end testing of healthcare application workflows across Dev, Staging, and Production environments, including AI summaries, ICD coding, de-identification, and provider-facing workflows.
- Tested REST APIs using Postman, validating requests, response payloads, HTTP status codes, authentication behavior, and error scenarios.
- Performed database validation using SQL/PostgreSQL, writing queries and comparing backend data with application behavior to identify data and UI–backend inconsistencies.
- Executed UAT and build validation, manually verifying critical workflows before deployments and validating authentication and role-based access behavior.
- Logged and tracked UI, API, database, and application-logic defects in Jira with clear reproduction details, and verified fixes after changes were delivered.
- Worked with Playwright-based automation by defining test flows, UI elements, expected behavior, and test conditions, then executing and validating automated tests.
- Maintained test cases and QA documentation in Confluence, adapting test coverage as application requirements and workflows changed.

## PROJECTS

**OrbitDesk Support Agent — RAG Agent | GitHub**

- Built a local-first RAG agent with LangGraph, FAISS, LLM generation, verification, hallucination checks, schema validation, retry logic, and safe-failure handling.
- Developed Pytest tests covering routing, schema validation, invalid inputs, confidence boundaries, and failure paths.

**Radiology Report Management System | GitHub**

- Tested a healthcare web application across UI, REST API, authentication, role-based workflows, and database validation using React and FastAPI.

## EDUCATION

**MIT Academy of Engineering (MITAOE), Pune, India**

B.Tech in Electronics & Telecommunication | Minor in AI/ML | CGPA: 8.45/10

## ACHIEVEMENTS & PUBLICATIONS

- **AIR 10 - Robocon 2022 (IIT Delhi)** | **Amazon ML Summer School 2023** | **Advanced SQL - HackerRank**
- **Publications:** Fall Detection Using HOG Feature Extraction and Adaptive Boosting Technique — IEEE | Classroom Activity Detection Using TinyML — Springer
